

## **OFFER**

### **UNIQUE CHEMICAL PRODUCT & APPLICATION SYSTEM TO PREVENT RISING DAMP IN ALL TYPES OF WALLS OF BUILDINGS**

## **DESCRIPTION**

A method of inserting a chemical damp-proof course in walls of buildings. It uses active chemicals proven over many years of widespread use but differs from other methods by inserting the chemicals into the wall in the form of circular-section frozen pellets. As the frozen ice-sticks melt, so the active liquid diffuses thoroughly into the wall material to provide a chemical barrier to dampness rising from the ground on which the wall stands. Holes are drilled in a horizontal (and sometimes vertical) line in the mortar joints or the bricks/blocks themselves. The system is suitable for all types of walls including stone and rubble-filled and is particularly effective in the treatment of older buildings. The product is manufactured in the UK and supplied pre-packed in individual packs of liquid ready to be frozen just before use. It will easily stay frozen during a normal working day.

## **MAIN ADVANTAGES**

Diffusion is more effective than pumping under pressure and much safer. Accurate dosing of the chemical into the wall is achieved thus allowing reduced costs and accurate cost control for the installer. No bulky containers or pressure equipment is required. The frozen ice-sticks are aqueous-based – safer than organic solvent-based materials (no fire hazard); they are easy and convenient to handle compared with liquids – with almost no risk from spillage. External walls can usually be treated from one side only (i.e. the outside) thus leaving the interior with no disruption.

## **MAIN APPLICATIONS**

For providing a damp-proof barrier in all walls of any thickness where either a dampcourse has never existed or where the original dampcourse may have broken down over the years. Usually applied by professionals in remedial and renovation work, but can also be applied successfully by the capable DIY enthusiast. Particularly suitable in “difficult” situations where other systems may not be recommended.

## **STAGE OF DEVELOPMENT**

Fully proven and in commercial use. Manufactured in the UK. Approved by the British Board of Agrément.

## **DATA AVAILABLE**

Full information is available on request.

## **COMMERCIAL OFFER**

Distributorships are available to companies able to show effective contacts in the building renovation or maintenance industry. In special circumstances manufacturing licences may be granted. Investment in or acquisition of the UK company may be considered.
